

ABOUT US

DANMEDICS is present in the hospital for more than 20 years. Starting with the development of state-of-the-art lighting technology, the portfolio has constantly expanded over the years and today covers large parts of the medical equipment needs in combination with the expansion and furnishing of many areas of hospitals, with a special focus on the operating theater and intensive care area.

As a global company, our location in the immediate vicinity of Frankfurt am Main International Airport is of great value.

We would be pleased to welcome you soon in our premises.

MODULAR OR & ROOM SOLUTION

With our modular solution, individual room concepts for operating theaters can be implemented quickly and reliably.

We accompany you from planning to completion.

DANAMEDICS

Complete solutions for all areas:

- Wall coverings
- Ceiling panels & lights
- Doors for every application
- Installations for the medical sector
- Scrub room solutions
- Adjoining room solutions
- Medical devices

WALL COVERINGS

DANMEDICS® SteriPanel® is a universal cladding system with which you can create both a space-saving pre-wall installation and self-supporting complete mono block walls.

It was specially designed for installation in operating theatres. Therefore, the HPL surfaces are permanently antibacterial and fixtures are integrated flush. Individual, full-surface photo prints or all-glass elements provide variety. Colour-matching seals and clean room silicone ensure a seamless working environment, a closed appearance and enable flawless, time-saving cleaning and disinfection.

Of course, we also offer stainless steel room concepts.

CEILING & LIGHTING

A system that is flexible enough to take all eventualities into account.

Ventilation ducts, medical gas supplies, electrical installations and clean room ceilings can be integrated into the ceiling. Our lights are precisely integrated into the ceiling grid and offer the best possible working conditions.

Options such as a cloudy sky also generate a feel-good climate in the stressful everyday operating room with little effort.

SPECIAL DOORS

Operating room doors are an essential part of the hygiene concept in operating rooms and thus make an important contribution to patient safety.

Our operating room doors are characterized by the use of moisture-resistant materials in the entire structure of the door leaf, by particularly robust and easy-to-clean laminate surfaces with permanent antibacterial properties and a flush integration of transparent windows.

This applies to classic operating room doors as well as to hermetic doors.

The optimized depth of the floor profile in our hermetically closing doors significantly reduces the risk of foot injuries and collisions.

FLUSH WALL INSTALLATIONS

Our flush fittings enable perfect, time-saving cleaning and disinfection and ensure a closed appearance.

We offer you individual and integrated solutions for all installations, which include:

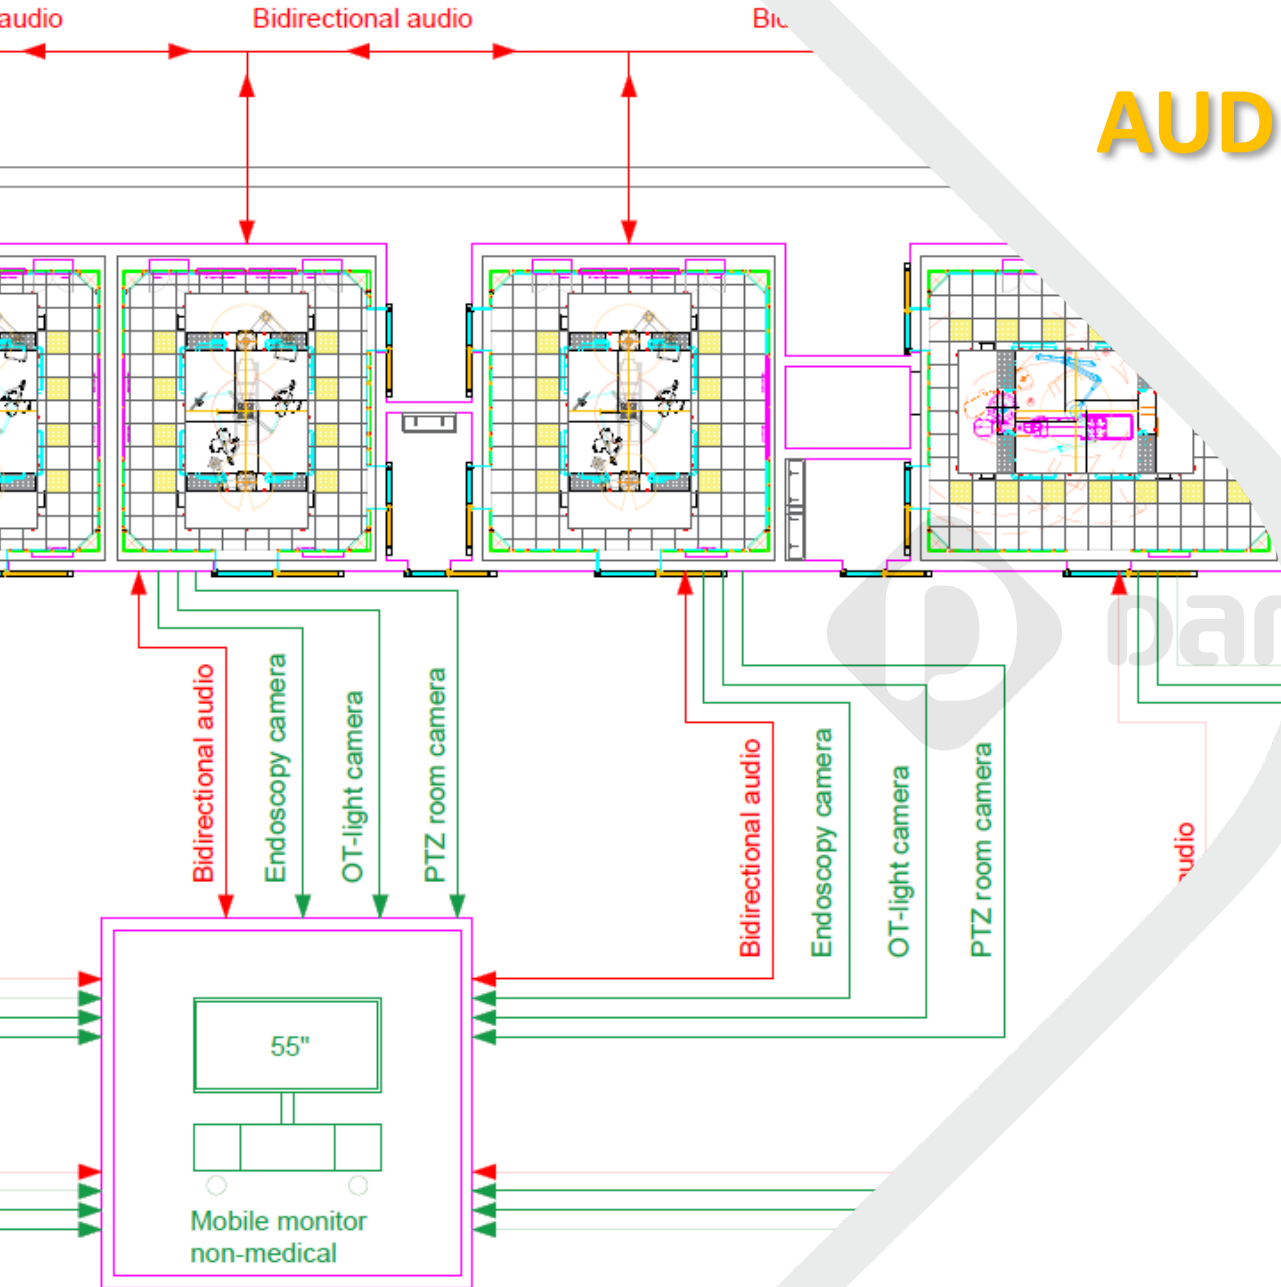

- Control panel
- Monitors
- Nurse work station
- X-ray viewer
- Built-in wardrobes
- Pass through
- Gas connections sockets
- Electrical connections sockets

DAN

AUDIO & VIDEO MANAGEMENT

Many years of experience in the field of image and sound transmission ensure smooth communication between individual rooms and an uncomplicated option for documentation.

Standards such as DICOM, PACS, HL7 and other interfaces can be easily integrated.

Hardware and software, which are perfectly coordinated with each other, facilitate the clinical process with their intuitive interfaces.

SCRUB ROOM

Hygiene is elementary and of central importance in the preparation and follow-up of an operation, the care of the patient and the prevention of contamination.

That is why we integrate all the necessary elements right from the planning stage and focus on your demands.

ADJACENT AREAS

Hospitals and medical facilities of all kinds require smooth processes at all levels.

We therefore offer our solutions across departments and thus complete all areas of staff and patients: Anesthesia induction areas, operating theaters, intensive care areas, patient rooms, and much more.

All rooms are planned according to individual customer requirements and fully equipped by us!

MEDICAL DEVICES

Years of cooperation with leading medical technology manufacturers enable us to coordinate devices and equipment in a way that your ideas of a smooth process can be implemented.

Service and after-sales support worldwide are guaranteed by an extensive network.

DE MEDICALS

GENERAL FACILITIES

We get involved in your project holistically and provide solutions for furnishing issues at the same time.

From the reception counter, waiting areas, adjoining accommodation, patient and staff rooms, canteen kitchens and wall cladding to administration and chief physician offices, we offer the solution from a single source.

LABORATORY

In addition to the medical area, we are able to support you in the laboratory area as well.

All laboratories are equipped with special, laboratory-approved worktops and are resistant to all common chemicals. The homogeneous work surface ensures a permanently clean environment.

Regardless of whether the focus is on gas-water installations such as osmosis taps and washbasins, or specific devices such as extractor hoods, autoclaves, tabletop centrifuges, thermostats, incubators, rotary evaporators or the ergonomic layout for the electrical connections, we would be happy to talk about your desired solution.
